EDITOR: JAMES W. MOSELEY

NON-SCHEDULED NEWSLETTER #21 - August 10th, 1964

FLYING SAUCERS STILL LANDING! - It seems that the giant 1964 saucer "flap" is going to continue indefinitely. Shortly after our September issue went to press, we received two more landing reports; and dozens of close sightings and near-landings continue to pour into our office from all over the country!

In the village of Conklin, near Binghamton, New York, five children saw an alien creature in mid-July. They said that a little man, wearing a helmet and plastic goggles, came up to them "making strange clicking sounds." The Visitor then walked back to his nearby spacecraft and climbed into it, as the boys ran away in panic. Mrs. Edmund Travis, mother of two of the boys, questioned the children closely, and believed their story. - This incident tends to confirm the veracity of Gary Wilcox, a farmer living in nearby Newark Valley, New York, who reported back in April that he conversed with two little men who identified themselves as Martians. This incident is described in detail in our September issue.

And, a newspaper article from Flemington, New Jersey, dated July 30th, tells of a local man who saw a UFO land in a field near his rural home. As Jack Hall was driving home late one night, he saw a strange glow, high up in the sky. Shortly afterwards the object landed in the middle of a 14-acre field. Mr. Hall walked toward it, but when he got to within about 500 feet of the object, it started moving toward him, causing him to panic and run. He described the thing as white, egg-shaped, and at least 30 feet in circumference. It had a glow coming from underneath it, and this light was seen by his wife and daughter in his house nearby.

MOON PHOTOS TO BE FOLLOWED BY PICTURES OF MARS: The success of the recent Ranger 7 moon shot was a great scientific achievement; but the ten pictures released out of the over 4,000 that were taken, showed little that could be construed as evidence of intelligent life. Several saucer researchers, due to the repeated failures of our attempts to photograph the moon, were caught out on a limb with predictions that the cameras would never work. Such was the fate of the Rev. Guy J. Cyr, who predicted that "truly exotic flora, very probably of an extremely fibrous, woolly texture" would be seen in the unlikely case that the cameras functioned properly. He also predicted "spacecraft maneuvering on and near the lunar surface."

In late October, two identical 570-pound payloads will be sent on an eight month journey to Mars, their purpose being to fly within a few thousand miles of the Red Planet and send back television pictures to the Earth. People tend to forget wrong predictions and to remember correct ones - so we will go out on a limb ourselves, here and now: The Mars probe is an extremely complicated undertaking, and the first attempts may fail. But when close-up pictures of Mars are eventually taken, we will see definite evidence of either a current highly-advanced civilization, or else we will see the ruins and remains of a former civilization that has now died out. But, although this will be of the greatest scientific importance, we will <u>not</u> advance <u>morally</u> as a result, and <u>no</u> confirmation will be found for any of the contactees who claim to have met highly advanced beings.

<u>IMPORTANT NOTICE</u>: Your subscription to the Non-Scheduled Newsletter will end with the <u>next</u> issue, which is #22. To insure the fact that your name will remain on our special Newsletter mailing list, please renew now. The cost is only one dollar.
